

## *Force for punched holes to 143.7 mm.*

### **Hydraulic punches for manual and battery powered operation.**

No matter whether hand, foot or battery powered, all hydraulic punches serve just one purpose: punching holes. Yet, contrary to popular belief, personal preferences have very little to do with choosing a punch. The punches are suitable for various applications or for holes up to certain sizes.

In addition, each punch has its own particular features that come into their own depending on the application.

- Hydraulic punches for hand operation with straight head.
- Hydraulic punches for hand operation with angled and rotating head.
- Hydraulic punches for foot operation.
- Hydraulic punches for battery and mains operation.

*Greenlee punching tools permit punching operations in various shapes and sizes.*
